

SETUP GUIDE

Activate the OutSystems MCP in Claude Code

Connect Claude Code to OutSystems so it can use the OutSystems tools, in five short steps.

How to read this guide

Every screenshot has **red markers** showing exactly where to click. When a screenshot has more than one marker, follow the order of the numbers.

Before you start

Make sure Claude Code is installed in VS Code and you are logged in (see the Claude Code installation guide). Then open the Claude Code panel in VS Code.

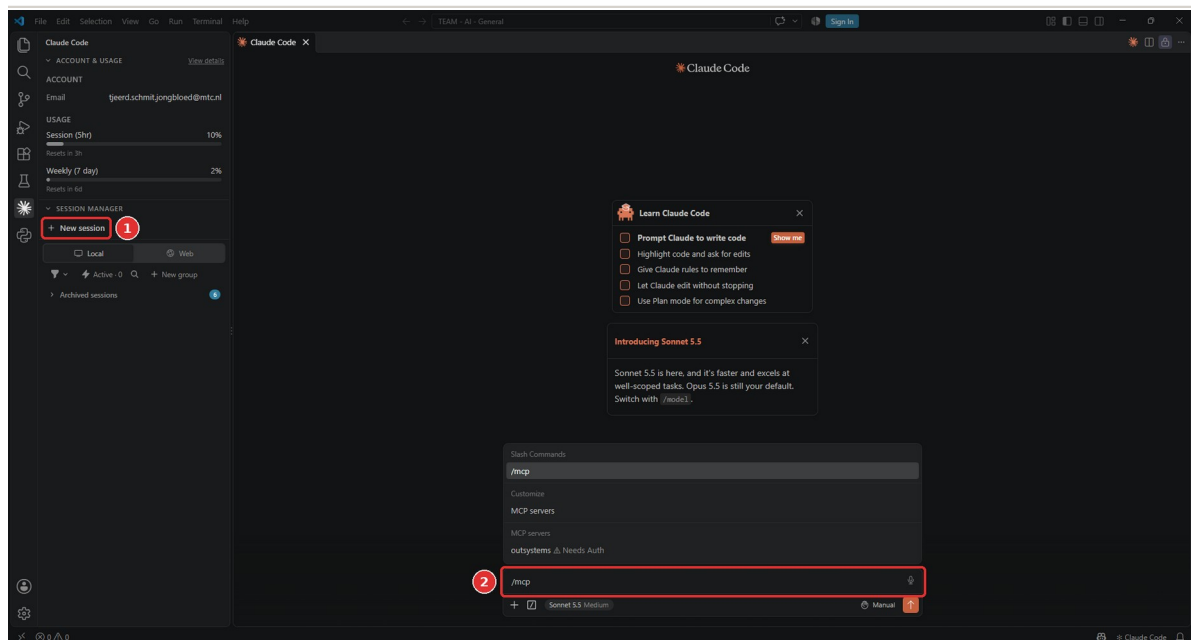

STEP BY STEP

Connect the OutSystems MCP

1

Click **New session**, type `/mcp` in the message box and press **Enter**.

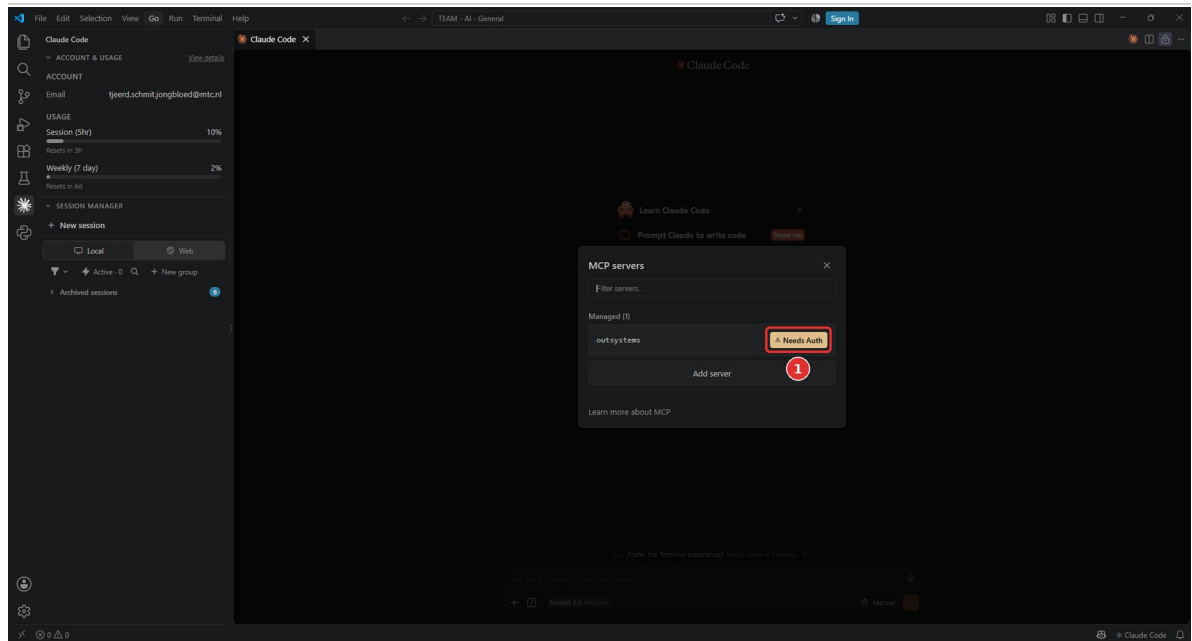

Click: **1** New session **2** Type `/mcp` and press Enter

2

Next to **outsystems**, click **Needs Auth**, then click **Authenticate**.

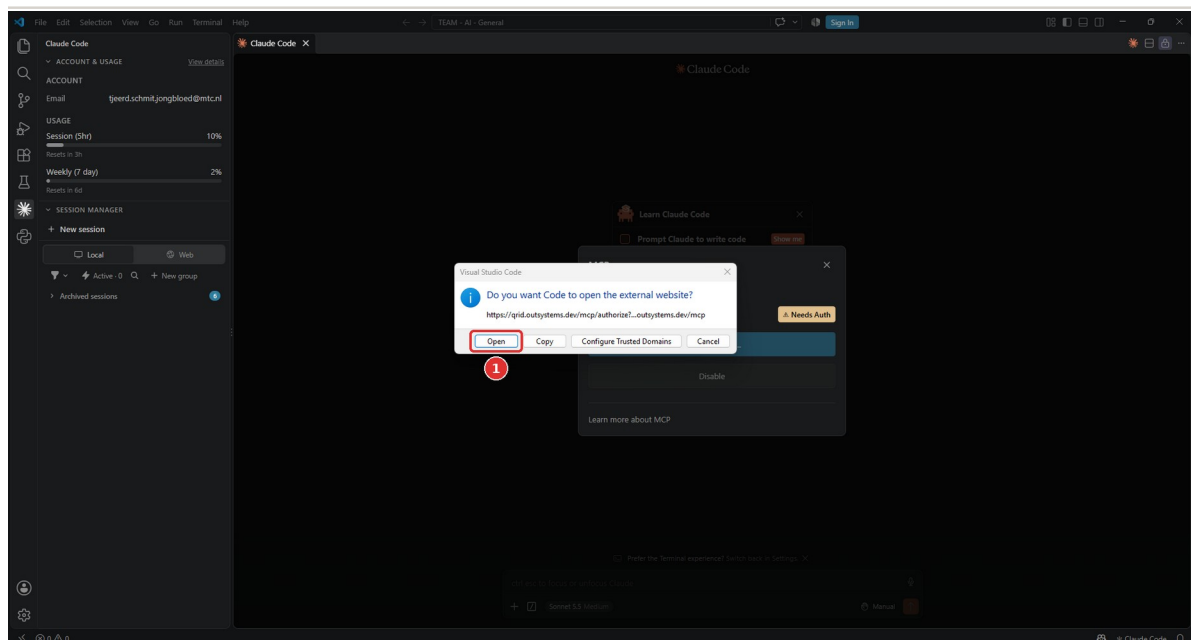

Click: **1** Needs Auth (then Authenticate)

3

VS Code asks whether it may open an external website. Click **Open**.

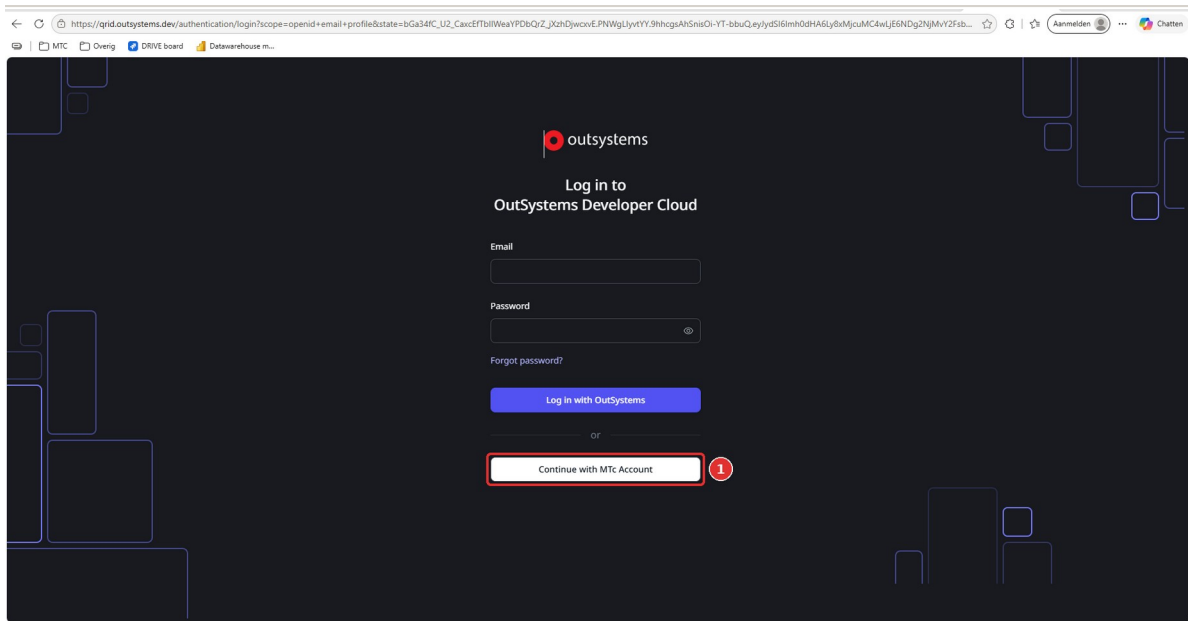

Click: **1** Open

4

Your browser opens the OutSystems login page. Click **Continue with MTc Account**.

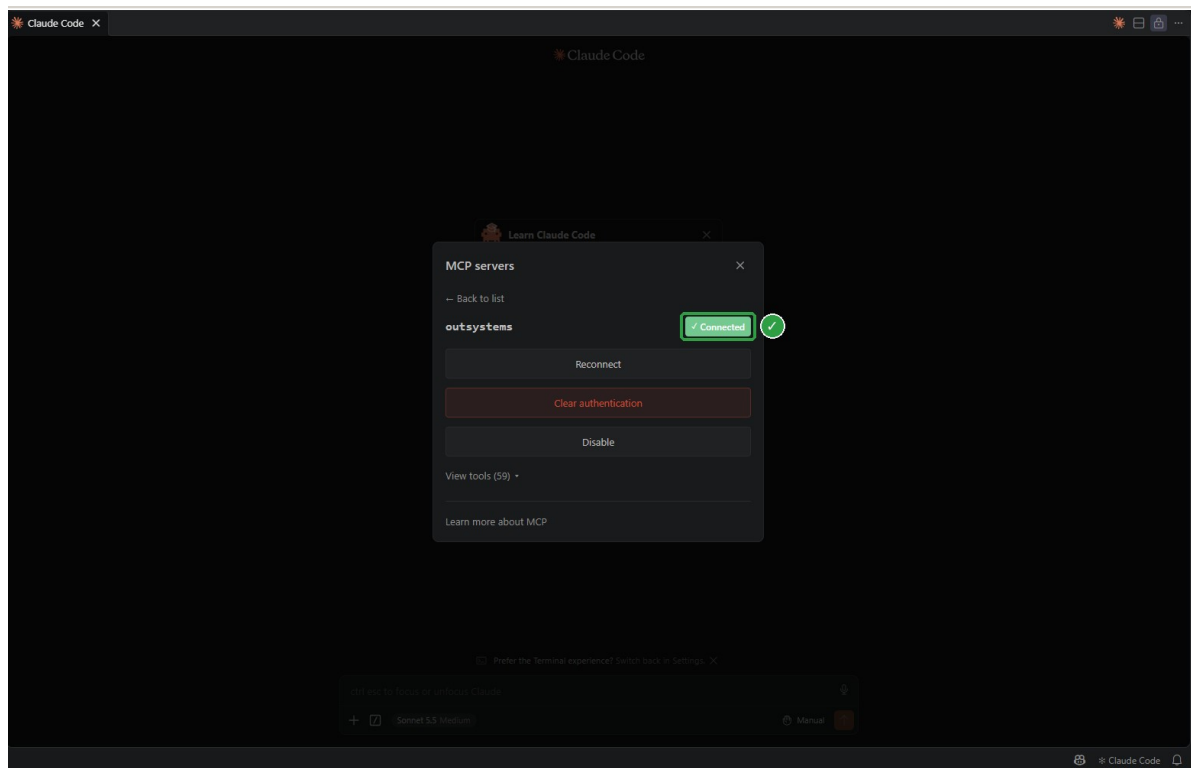

Click: **1** Continue with MTc Account

5

Follow the login steps in your browser. Back in VS Code, the OutSystems status should now show **Connected**.

Look for: **✓ Connected**

Done — the OutSystems MCP is active! 🎉

Claude Code can now use the OutSystems tools.
